

Jordan Newman

Staff+ Software Engineer | Developer Productivity, Platform Infrastructure, Distributed Systems

Marlboro, NJ | 347-739-4731 | phoem@mac.com | <https://www.linkedin.com/in/jordan-newman-aa3b19b2/> | <https://github.com/phoem>

Willing and able to work in Anthropic's New York City office

SUMMARY

Hands-on software architect and infrastructure engineer with 20+ years designing, building, and operating production systems. Experienced with large monorepo environments, remote builds, GitHub Actions, Azure Pipelines, package and dependency workflows, developer tooling, and container-orchestrated delivery. Currently contributes to architecture decisions, engineering standards, platform direction, shared libraries, documentation, and AI-assisted engineering workflows across teams. Previously architected 24/7 infrastructure spanning approximately 3,000-4,000 servers, about 10 locations, and more than 65 Gbps of peak traffic while remaining deeply hands-on in systems design and implementation.

CORE CAPABILITIES

- **Developer productivity:** Large monorepos, remote builds, GitHub Actions, Azure Pipelines, CI/CD, CLI tools, developer-facing services, GitHub automation, shared libraries, engineering standards
- **Package ecosystems:** npm, Yarn, NuGet, pip, Poetry, Cargo, FreeBSD Ports and pkg, APT, dpkg, RPM, yum, Homebrew
- **Platform and containers:** Docker, Kubernetes, Terraform, Azure DevOps, deployment automation, security scanning, container orchestration, reliability, observability
- **Languages and systems:** Python, Rust, Go, C, C++, C#, FreeBSD, Linux, non-blocking I/O, shared memory, inter-process communication, GDB, Valgrind, Linux perf
- **Distributed infrastructure:** High-volume production systems, HTTP/CDN architecture, TCP/IP, DNS, BGP4, multi-datacenter operations, monitoring, telemetry, incident diagnosis

SELECTED IMPACT

- Contribute to technical decisions, engineering standards, shared libraries, platform direction, developer tooling, documentation, CI/CD, and AI-assisted workflows as a member of Advantive's Architecture Team.
- Architected and operated customer-facing hosting and CDN infrastructure spanning approximately 3,000-4,000 servers across about 10 locations and carrying more than 65 Gbps of peak traffic.
- Designed and implemented PrimeHTTPD, a high-concurrency C/FreeBSD serving runtime deployed across approximately 200 servers and supporting more than 150,000 concurrent connections.
- Bring extensive experience building CLI tools, developer-facing services, GitHub automation workflows, and Azure Pipelines; current Nexus work includes a standalone CLI and GitHub repository/issue/file/pull-request tooling.
- Contributed a merged Rust Azure Key Vault provider to cachix/secretspec, changing 14 files across implementation, authentication, validation, integration tests, documentation, and maintainer-review fixes.

DEVELOPER PRODUCTIVITY AND PLATFORM ENGINEERING

- Work with large monorepo environments and remote builds through GitHub and Azure workflows, including direct experience with GitHub Actions and Azure Pipelines.
- Use package and dependency tooling across JavaScript, .NET, Python, Rust, FreeBSD, Linux, and macOS ecosystems, including npm, Yarn, NuGet, pip, Poetry, Cargo, Ports/pkg, APT/dpkg, RPM/yum, and Homebrew.
- Implement and improve Docker, Kubernetes, Terraform, Azure DevOps, CI/CD, security-scanning, and developer-tooling workflows supporting shared platform delivery.
- Collaborate with engineers and architects on technical strategy, platform direction, language and engineering standards, shared libraries, documentation, and reusable workflows.
- Build developer-facing capabilities in Nexus, including a CLI and tools for GitHub repositories, issues, files, and pull requests, plus structured code editing, Git operations, tests, and builds.
- Contributed a Rust provider to the Cachix secretspec project, gaining concrete exposure to a tool used in the Nix ecosystem while working across its implementation, tests, and documentation.

DISTRIBUTED SYSTEMS AND TECHNICAL LEADERSHIP

- Personally took PrimeHTTPD from architecture through hands-on implementation and production operation, using a single-process kqueue core to keep high-volume request processing non-blocking.
- Isolated blocking work through configurable I/O workers, Unix-domain sendmsg() descriptor passing, shared mmap() worker state, least-busy-worker dispatch, and sendfile() with SF_NODISKIO.
- Built monitoring, health-check, telemetry, deployment, authentication, security, packet/DNS analysis, and DDoS systems for 24/7 production operations.
- Led large-scale, complex technical projects and engineering work throughout more than 15 years across two ISPRIME tenures; created internal technical documentation, trained most employees, and mentored two beginners over several years into technical experts and eventual company leaders.

PROFESSIONAL EXPERIENCE

Advantive - Senior Development Specialist, APIs and Integrations

Remote / Tampa Bay, FL | June 2022 - Present

- Serve on the Architecture Team, contributing to technical decisions, engineering standards, shared libraries, platform direction, documentation, developer tooling, and AI-assisted engineering workflows across teams.
- Implement and improve Docker, Kubernetes, Terraform, Azure DevOps, CI/CD, security-scanning, and delivery workflows across engineering teams.

DDI System - Senior Development Specialist

Manalapan, NJ | October 2021 - July 2022

- Modernized legacy VB.NET components in C# and integrated Microsoft Office 365 SMTP OAuth for secure customer-facing workflows.

ISPRIME - Chief Executive Officer

Weehawken, NJ | March 2018 - December 2019

- Led datacenter modernization, operational restructuring, and improvements to internally developed monitoring, security, and infrastructure platforms.

ISPRIME - Owner and CIO

Weehawken, NJ | January 2001 - December 2014

- Held technical, architectural, and operational responsibility for a 24/7 hosting and CDN platform spanning approximately 3,000-4,000 servers, about 10 locations, multiple datacenters, and more than 65 Gbps of peak traffic.
- Designed and built PrimeHTTPD from first principles, deploying it across approximately 200 servers with high-concurrency serving, workload-aware dispatch, caching, authentication, and operational controls.
- Built production monitoring, telemetry, deployment, infrastructure-management, authentication, networking, DDoS defense, packet-analysis, and DNS-analysis software in response to operational requirements.
- Developed production FreeBSD kernel modules for filesystem virtualization, execution monitoring, system protection, telemetry, and filesystem-performance instrumentation.
- Led through architecture, direct implementation, technical documentation, employee training, mentoring, and cross-functional operational ownership.

Earlier Software and Systems Experience

- **DDI System - Computer Programmer** | April 2017 - March 2018: Built ERP integrations and automated order, catalog, image, safety-data, SFTP, supplier, SellerCloud, and MultiValue/UniVerse workflows.
- **Too Much Media - Computer Programmer** | January 2016 - April 2017: Developed real-time browser chat integrated with ticketing and implemented OAuth 2.0 authorization.
- **MFCXY - Computer Programmer** | December 2014 - September 2015: Developed backend and Windows-client features plus cross-platform database-migration middleware.
- **AJPM - Programmer / Owner** | November 2012 - December 2013: Built purchasing, inventory, repair, resale, and financial workflow software.
- **FatWallet.com - Systems Administrator** | December 2000 - June 2001: Rebuilt production infrastructure without customer-facing downtime and created automated availability and health alerting.

EDUCATION

Brookdale Community College - Computer Science coursework; left during the first semester to pursue ISPRIME full-time during rapid company growth.
